

# Welcome to the Elizabeth Starker Cameron Demonstration Forest

In 1952, this 260 acre forest was purchased by Starker Forests and managed for timber production. In 1994, the property was gifted by Elizabeth Starker Cameron to the Oregon State University College of Forestry to be used as a demonstration forest showcasing new and innovative non-industrial practices appropriate for small woodland owners.

The Elizabeth Starker Cameron Demonstration Forest is managed with three specific purposes in mind:

To demonstrate good forest stewardship

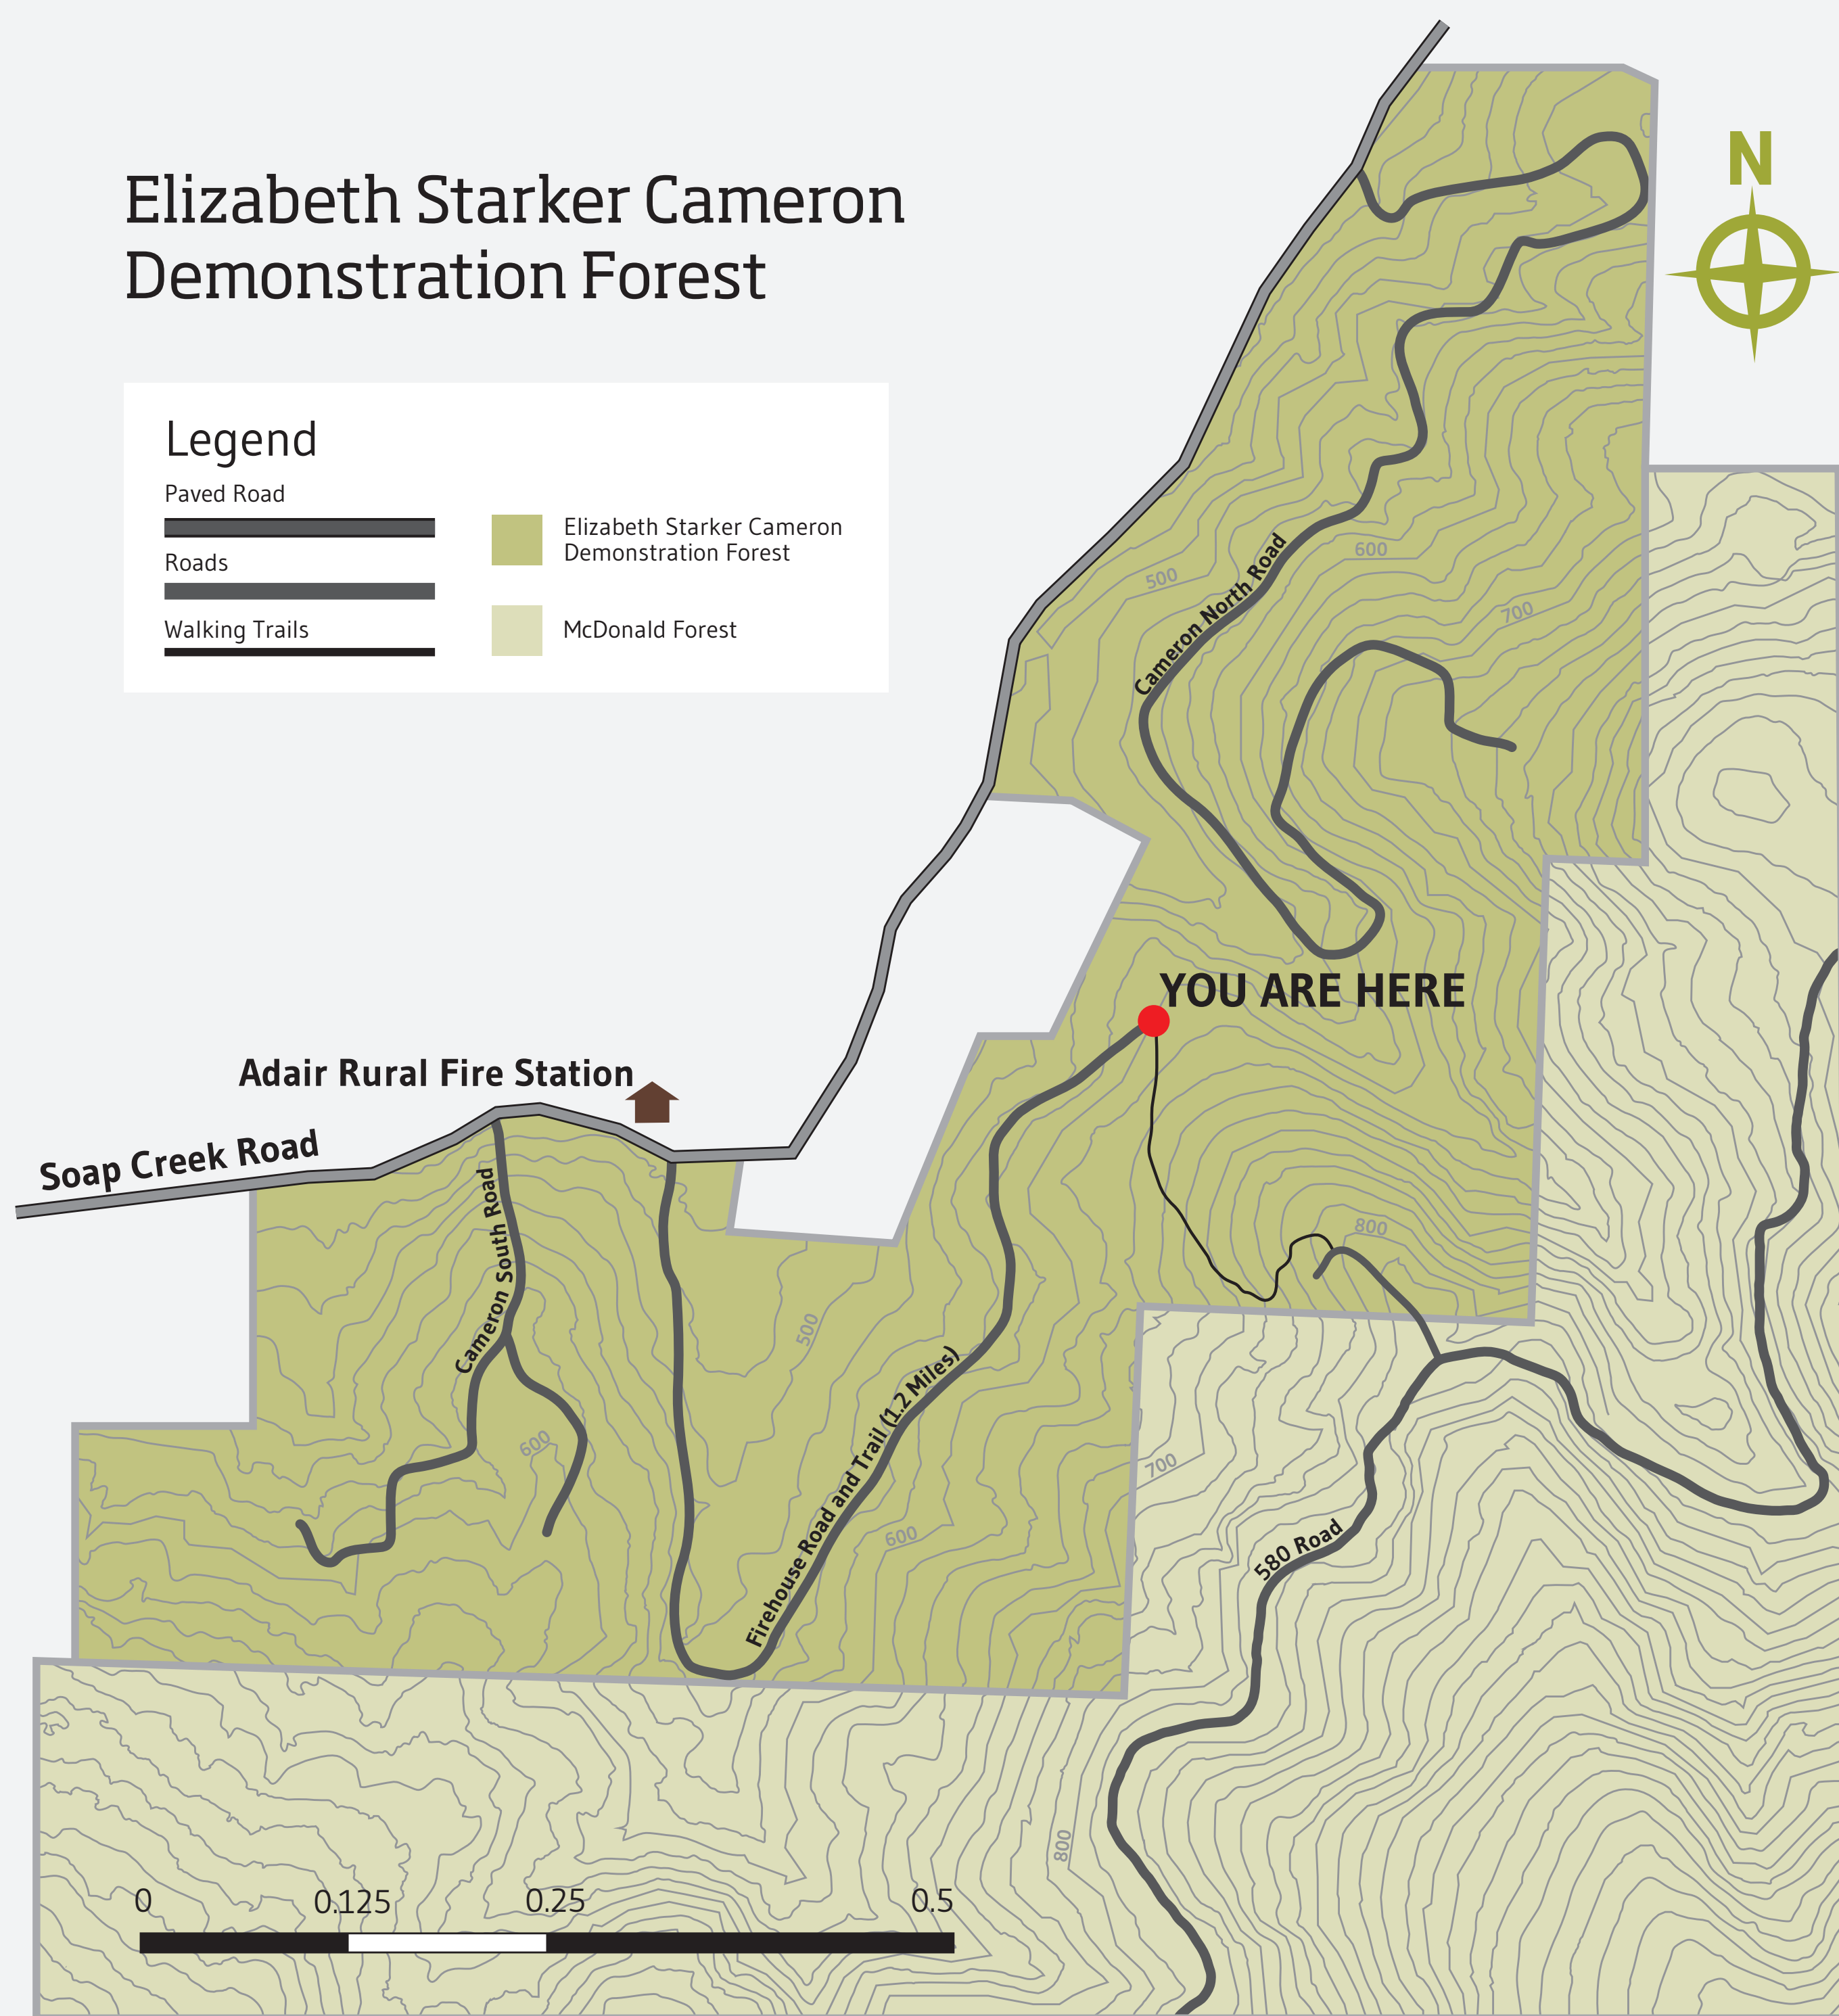

To experiment with management alternatives for private forest owners

To provide income from periodic timber harvests to support a program of private and family forestry at OSU

## Did you know?

The federal government owns most of the forest land in Oregon, but annually family forests produce just as much timber.
